## Metodické poznámky

Zdroj údajov: štatistické zisťovanie *Hlásenie o užívateľovi drog liečenom zo závislosti – ZS (MZ SR) 4-12* v zmysle zákona č. 153/2013 Z. z. o národnom zdravotníckom informačnom systéme a o zmene a doplnení niektorých zákonov. Zber a spracovanie údajov vykonáva Národné centrum zdravotníckych informácií.

Hlásenie predkladajú liečebné zariadenia poskytujúce medicínsku liečbu užívateľom drog prostredníctvom svojich útvarov s odborným zameraním psychiatria, medicína drogových závislostí, detská psychiatria a útvarov všeobecného lekárstva (vrátane zdravotníckych zariadení Ministerstva spravodlivosti). V publikácii uvádzame okrem pôvodných sumárnych údajov (T1 – T18) aj vybrané údaje zvlášť za zdravotnícke zariadenia rezortu Ministerstva zdravotníctva SR a iných zriaďovateľov (T19 – T24) a zvlášť za zdravotnícke zariadenia Ministerstva spravodlivosti SR (T25 – T30).

Publikačné výstupy zahŕňajú len záznamy **o prvej liečbe pacienta v roku** (ak zariadenie poskytne pacientovi liečbu v priebehu roka viackrát, hlásenie sa vyplní len raz).

Monitoring drogovej situácie na Slovensku realizuje Národné monitorovacie centrum pre drogy na Ministerstve zdravotníctva SR na základe 5 hlavných indikátorov vypracovaných Európskym monitorovacím centrom pre drogy a drogovú závislosť (EMCDDA – European Monitoring Centre for Drugs and Drug Addiction). Jedným z indikátorov je aj **dopyt po liečbe (TDI – Treatment Demand Indicator)**, pre ktorý poskytuje informácie Národné centrum zdravotníckych informácií prostredníctvom zberu a spracovania *Hlásenia o užívateľovi drog liečenom zo závislosti*. Obsahová náplň aj metodika hlásenia korešponduje s medzinárodným protokolom TDI a poskytuje tak za Slovensko porovnateľné informácie s krajinami Európskej únie. Publikácia je v tomto roku rozšírená o vybrané výstupy v zmysle požiadaviek EMCDDA (T31 – T38).

V súlade s metodikou EMCDDA sú užívateľmi drog osoby užívajúce nezákonné drogy, a to:

- drogovu závislosť – osoby systematicky zneužívajúce drogy so známami chorobnej toxikomanickej závislosti (fyzickej, psychickej),
- zneužívajúci drogy – osoby s nesystematickým zneužívaním drogy, ktorá vedie k poruchám niektorých oblastí života (zdravie, rodina, práca, spoločenské vzťahy).

**Primárna droga** – hlavná droga, ktorá je príčinou drogových problémov osoby, pre ktorú bola zahájená liečba, a spôsobuje klientovi najväčšie problémy.

**Sekundárna droga (S1), (S2), (S3), (S4)** – iné aktuálne užívané drogy, ktoré na dôvažok k primárnej droge spôsobujú klientovi problémy. Poskytujú reálnejší obraz o mnohonásobnom užívaní drog.

Zo sledovania sú vylúčené:

- tabak,
- alkohol ako primárna droga (alkohol je uvádzaný len ako sekundárna droga),
- užívanie látok predpísaných za účelom medicínskej liečby (sedatíva, hypnotiká, analgetiká, atď.).

### Methodological note

Source of data: statistical information Report on drug users treated from drug addiction ZS (MZ SR) 4–12 is governed by Act no. 153/2013 Coll. on the National Health Information System and on Amendments and Additions to Certain Laws. The National Health Information Centre collects and processes data.

The reports are submitted by health facilities providing health care to drug users via units specialised in psychiatry, medicine of drug addiction, paediatric psychiatry and general medicine units (including health facilities of the Ministry of Justice). On the top of original summary data (T1 – T18) the publication introduces also selected data separately for health facilities of Ministry of Health SR and other establishers (T19 – T24), and specially for facilities of Ministry of Justice SR (T25 – T30).

Publications outputs include only report about **first patient treatment in year** (if health establishment provides the patient treatment several times during the year, the report will be completed only once).

Monitoring of drug situation in Slovakia is realised by National Monitoring Centre for Drugs at Ministry of Health SR based on 5 main indicators elaborated by European Monitoring Centre for Drugs and Drug Addiction (EMCDDA). One of the indicators is **treatment demand indicator (TDI)**, for which the information is provided by National Health Information Centre by means of collection and processing Report on drug users treated from drug addiction. Content and methodology of report corresponds with international protocol of TDI, and offers information for Slovakia comparable with countries of European Union. The publication in this year is extended by selected outputs in sense of requirements of EMCDDA (T31 – T38).

In accordance with the EMCDDA methodology, drug users are persons using illicit drugs:

- **drug addicted persons** – persons with systematic drug abuse with symptoms of chronic toxicomaniac addiction (physical, psychological),
- **drug-abusing persons** – persons with non-systematic drug abuse which leads to disorders of various areas of one's life (health, family, work, social relations).

**Primary drug** – main drug, which is the cause of drug problems, for which a person undergoes a treatment.

**Secondary drugs (S1), (S2), (S3), (S4)** – other currently used drugs, which apart from the primary drug, cause problems to a person. They present a picture of multiple drug use.

From statistical monitoring are excluded:

- tobacco,
- alcohol as primary drug (alcohol is reported only as secondary drug),
- substance use prescribed for the purpose of medical treatment (sedatives, hypnotics, analgesics, etc.).

## Úvod

Liečbu pre užívanie nezákonných drog v roku 2016 na Slovensku podstúpilo 3 253 osôb (59,9 na 100 000 obyvateľov), z toho 1 116 bolo liečených v nemocniciach pre obvinených a odsúdených a ústavoch na výkon trestu odňatia slobody. Oproti predchádzajúcemu roku počet liečených vzrástol o 533 a za posledných desať rokov až o 1 268 pacientov. Muži tvorili 81,4 % všetkých užívateľov, v roku 2016 ich bolo 2 649 (100,0 na 100 000 mužov), z nich 1 021 bolo liečených vo výkone trestu odňatia slobody. Liečiacich sa žien bolo 604 (21,7 na 100 000 žien).

Zo všetkých 3 253 pacientov bolo už v minulosti liečených 1 737 a prvýkrát liečených 1 413. Najvyšší podiel opakovanej liečby bol u užívateľov heroínu (86 %) a hypnotík a sedatív (66 %). Liečba prvýkrát v živote prevládala u užívateľov kokaínu (78 %) a marihuany (66 %). Pacientov podstupujúcich liečbu v nemocniciach pre obvinených a odsúdených bolo v minulosti liečených 34 %.

Najviac osôb podstúpilo liečbu pre užívanie stimulačných látok ako primárnej drogy (1 239, z nich 1 192 užívalo pervitín). Podiel týchto užívateľov (38,1 %) v porovnaní s podielom v roku 2015 klesol o 3,7 percentuálneho bodu. Druhým najčastejším dôvodom liečby bolo užívanie opiátov (869 liečených, z nich 686 užívalo heroín), ktorých podiel sa medziročne zvýšil o 4,6 percentuálneho bodu na 26,7 %. Užívateľov cannabisu bolo liečených 739, z nich 721 užívalo marihuanu. Ich podiel (22,7 %) oproti roku 2015 vzrástol o 0,1 percentuálneho bodu.

Vek liečených z drogovej závislosti sa v porovnaní s predchádzajúcimi rokmi zvýšil. Doposiaľ tvorili najvyšší podiel pacienti nižších vekových skupín (od 20 do 29 rokov), v roku 2016 to boli pacienti vo veku 30 až 34 rokov (21,9 %). Počet užívateľov vo veku 30 a viac rokov pritom medziročne narástol o 47 %. Najvyšší priemerný vek mali užívatelia hypnotík a sedatív (48,0 rokov) a najnižší užívatelia halucinogénov (24,0 rokov). Zo závislosti na heroíne sa liečili priemerne 36-roční pacienti (36,4 muži a 34,9 ženy), na pervitíne 29,1-roční (29,6 muži a 27,2 ženy) a marihuane 26-roční (26,4 muži a 22,1 ženy). Počet liečených detí do 14 rokov klesol z 14 na 7 a mladistvých od 15 do 19 rokov z 295 na 271. U oboch vekových skupín išlo najčastejšie o liečbu zo závislosti na marihuane.

Z hľadiska kraja trvalého bydliska pacienta bolo najviac liečených z Bratislavského kraja (155,1 na 100 000 obyvateľov) a najmenej z Prešovského kraja (9,4 na 100 000 obyvateľov). Užívatelia z Bratislavského kraja boli pritom najčastejšie liečení zo závislosti na heroíne, z Prešovského kraja najmä zo závislosti na drogách zo skupiny cannabis a v ostatných krajoch prevládali stimulačné látky. Bez trvalého bydliska v SR v roku 2016 podstúpilo liečbu pre užívanie nezákonných drog 23 osôb.

Najčastejším spôsobom podávania primárnej drogy bolo fajčenie (34,6 %), predovšetkým u užívateľov marihuany. Po ňom nasledovalo injekčné podanie drogy (30,3 %), pri ktorom sme zaznamenali najvyšší medziročný nárast. Tento spôsob si vyberali hlavne užívatelia heroínu. Šnupanie zvolilo 21,9 % liečených, najmä pri užívaní pervitínu.

Podľa spôsobu života boli v 82,4 % zo závislosti liečení slobodní užívatelia a v 49,8 % žijúci v jednej domácnosti s rodičmi. So zreteľom na úroveň vzdelania to boli hlavne muži so stredným vzdelaním bez maturity (921) a ženy s ukončeným základným vzdelaním (243), podľa pracovného stavu pri oboch pohlaviach dominovali nezamestnaní (muži 1 345, ženy 276).

Sekundárnu drogu užívalo 1 919 pacientov, najčastejšie ňou bol pervitín (676 užívateľov), marihuana (647) a alkohol (227). Z nich 17 liečených užívalo kombináciu viacerých psychoaktívnych látok, pri ktorých nie je možné stanoviť primárnu drogu. Pri určení primárnej a sekundárnej drogy nezáleží na tom, s ktorou drogou užívateľ začal, ale od frekvencie užívania. Za sekundárnu drogu sa nepovažuje nepravidelné užitie malého množstva iných látok.
